What is Octave Forge?

Good question :-) A crude characterisation of OF is that it hosts the Octave related things that are not part of Octave:

- *packages*
- *binaries for Win & Mac*
- *various minor things*

I consider the two first to be important; I don't know if we are hosting other stuff of much interest today (I think we host some Octave embedding code that many people like). As to the aim, then I guess it is to pick up what Octave cannot. Not the greatest aim ...

Søren Hauberg
